GPS TRACKING & LIVE MONITORING

Trucks vans cars management system , alarm warning to cell phone

Benefits of GPS tracking

How will a vehicle tracking system improve your business?

If you're the owner or manager of multiple vehicles and are trying to determine whether or not a GPS-based fleet management system is right for your business, ask yourself the following questions:

- How can you be sure your vehicles are being productive and are where they're supposed to be at any given time?
- Do you know whether all of the costly overtime you're paying out is necessary?
- How do you protect your drivers and your reputation in the face of customer disputes, vehicle theft and accident claims associated with your fleet?
- When handling customer service calls about scheduled stops or deliveries, is it easy or difficult for you to provide accurate and timely information?
- Are your dispatchers sure drivers are taking the most efficient routes to their jobs? How long does it take for them to locate a particular vehicle?
- How do you currently measure and manage fleet safety? Are your drivers and vehicles as secure as they should be?
- How deeply are high fuel bills cutting into your bottom line each year?
- How deeply are insurance risks and costs cutting into your bottom line each year?

A business owner or fleet manager with Live-Tracking GPS installed on their vehicles will be able to answer these questions in seconds. If you're not able to, you're probably losing profits that should be adding to your bottom line.

The Live-Tracking vehicle tracking system allows businesses with mobile workforces to recover the time and money they're losing due to operational inefficiencies, and add it to their profits. It's that simple.

It's time to think seriously about Live-Tracking.
